Multiple Colors, Create a Good Atmosphere

The color of the light can be switched freely, and the color is not repeated. The meaning of light for home is not only lighting, but also the meaning of life. Lights of different brightness will bring us different moods. Different scenes match different lights. The interior presents a variety of style changes and colorful life.

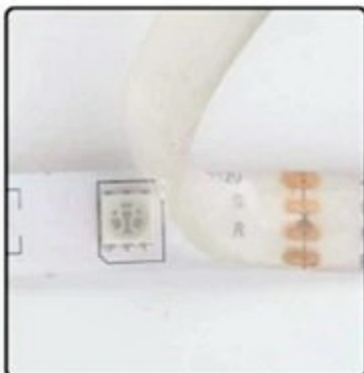

Can be cut optional

imported resistance

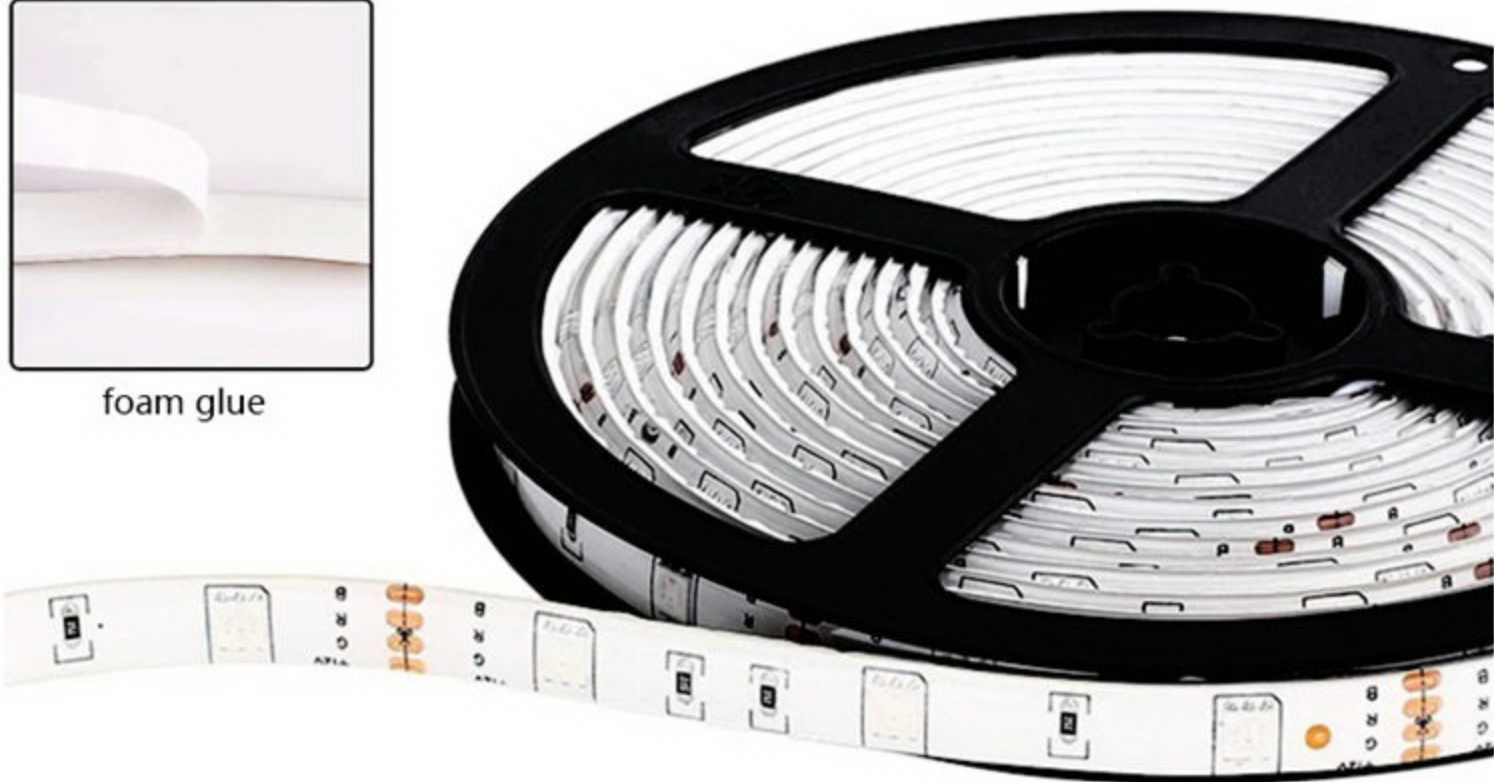

chip lamp beads

PU glue

foam glue

5 Meter, Unrestricted

The main body of the RGB color light strip (5 meters) can be attached to the TV, bar counter, sofa, corridor, staircase, etc. It is simple and convenient. In the monotonous night, it can change your home with different colors.

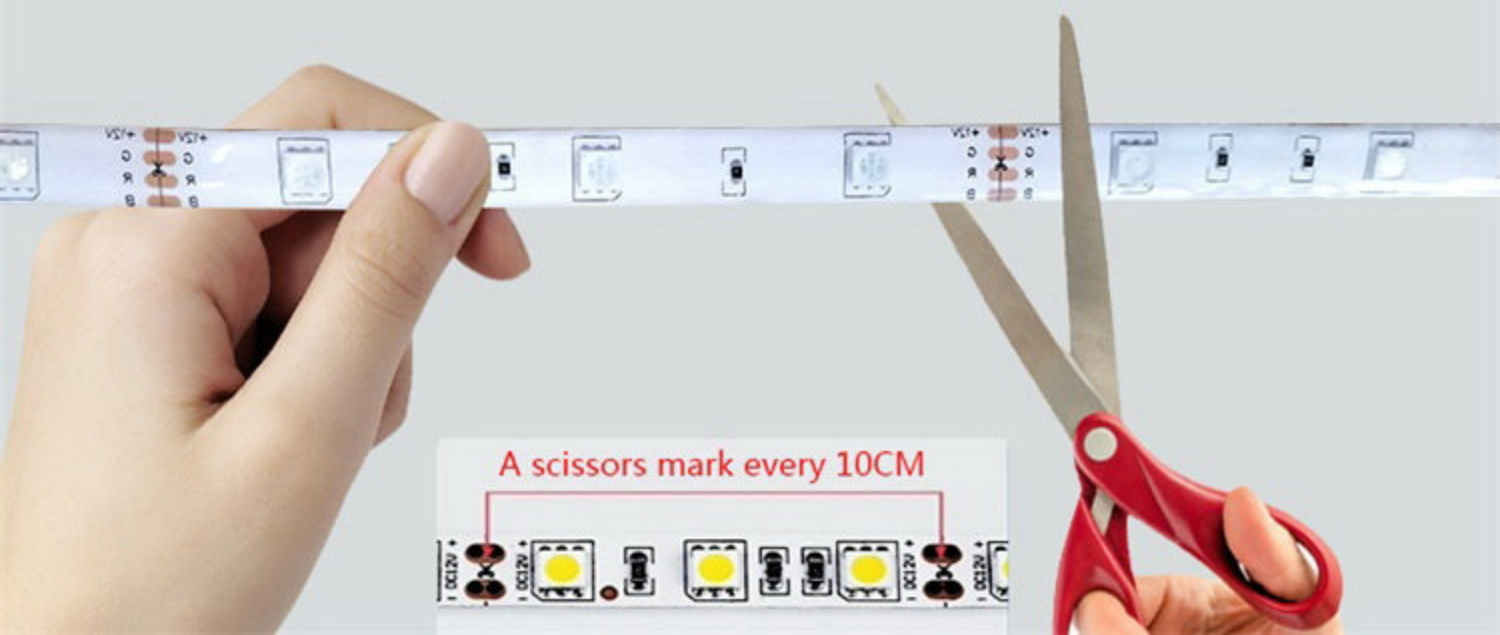

You Can Easily do it to Stick or Tear off

Special adhesive and release paper with easy-to-tear stickers, non-destructive installation, simple and convenient

marked with a tailoring logo. If you need to cut into sections, please cut at the cutting notch, it is strictly prohibited to cut between the lamp beads

A scissors mark every 10CM

High Light Transmittance

It is a kind of lamp that can protect the eyes. It is made of high light transmittance PC material. The light transmittance is as high as 95%. The illumination uniformity is good. It is not irritating to the eyes. In comparison, it has a longer life and is more energy-efficient.

Can Control No Matter How Far The Distance

Music Mode

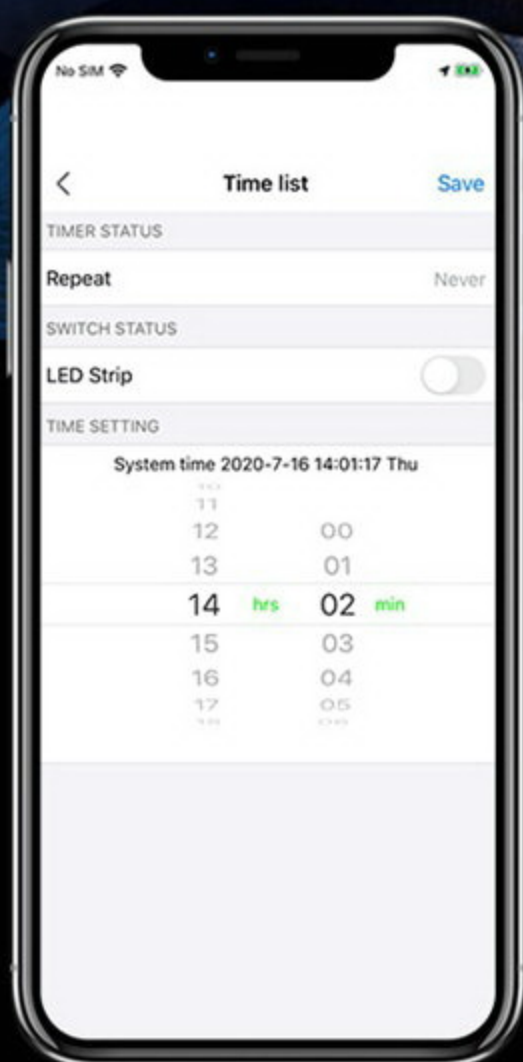

The lighting changes with the rhythm of the music, allowing the lighting to create a perfect atmosphere for you, flickering, gradual change, light and dark, multiple changing modes, and enjoy the fun of life.

Timing Mode

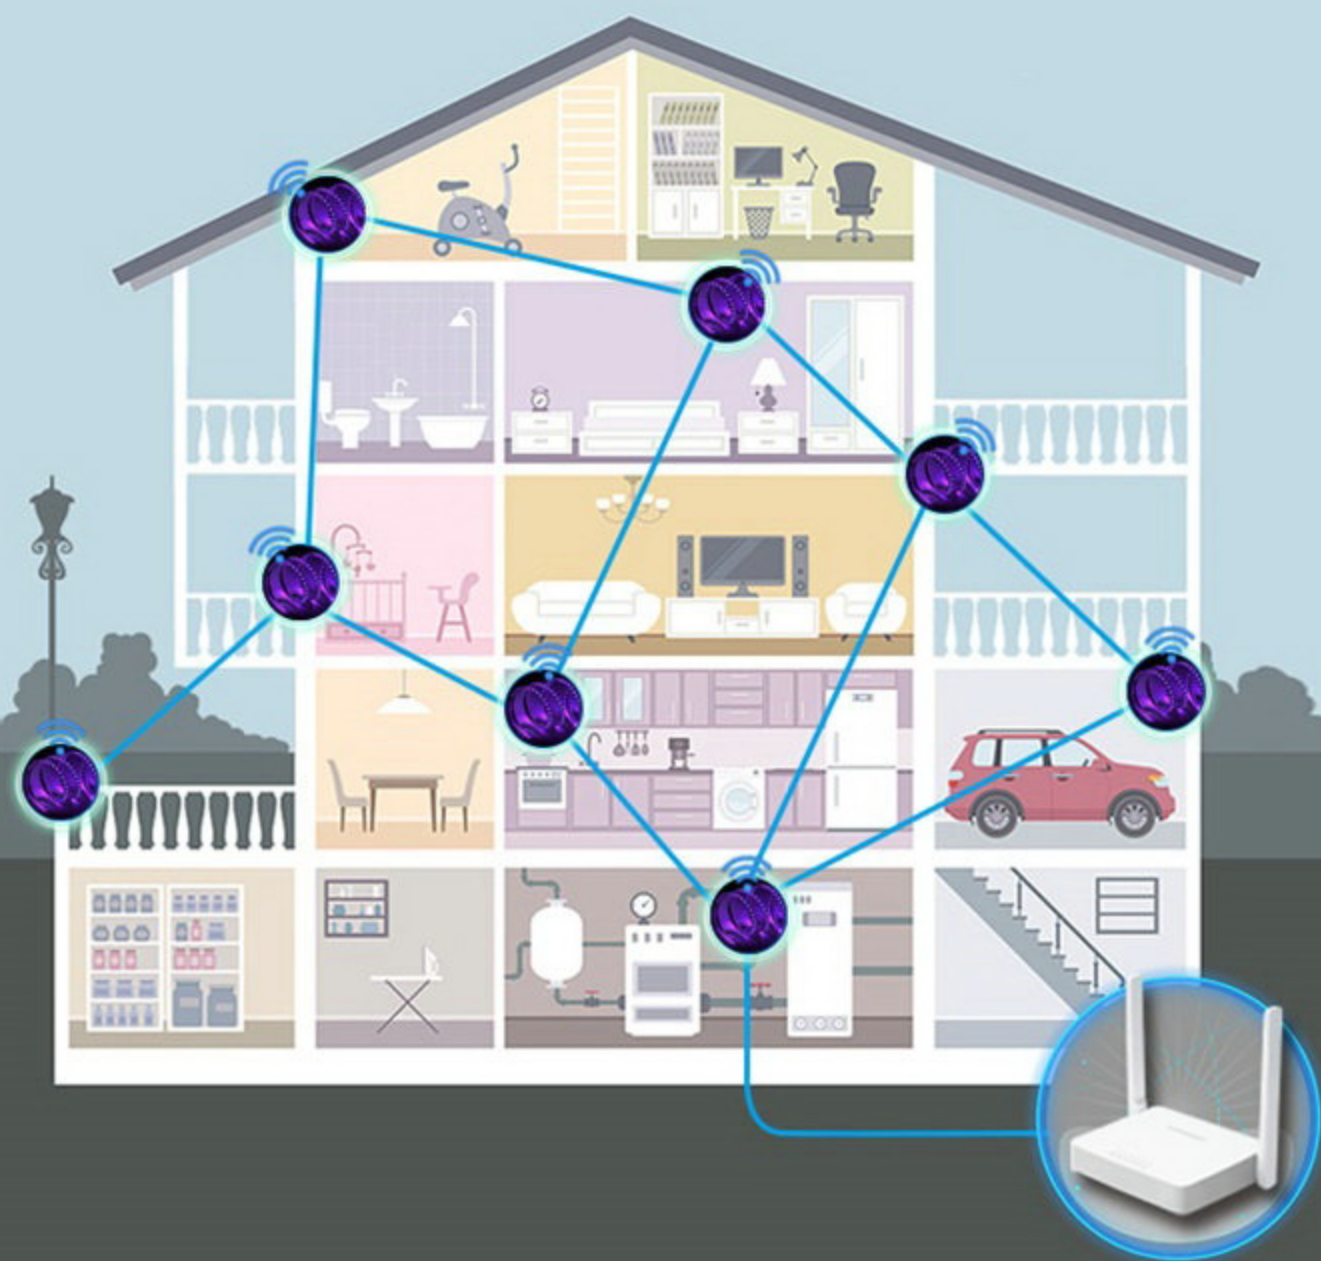

It can be set freely through the APP to customize the on/off time of the lights, set the timing to turn off the lights before going to bed to accompany you to sleep peacefully, set the automatic light on the next morning to wake you up, and turn on the lights at night at home, which can also prevent thieves.

WIFI-MESH Network

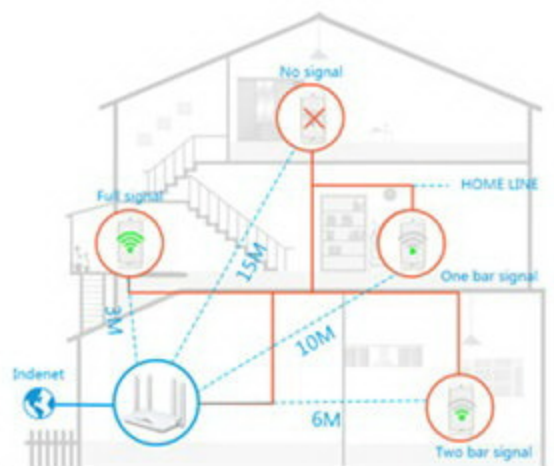

The L8 WIFI Smart RGB Color light strip adopts the most advanced MESH technology, which can automatically connect to the Internet, which is faster and more stable, and the signal can easily cover the entire room.

Advantages of WIFI Mesh

Traditional WIFI

It can't cover room completely, and the switch cannot connect WIFI which far away from router

WIFI MESH

No matter how many device, only one device connect with router, no requirements for the router, There won't off line problem

Traditional router can connect 10 devices at most. Too many devices will cause the signal badly and offline.

Switches can be mutual network with each other, Forward WiFi signals, each switch can be far away 10M, easy to cover all kinds of large houses, villas, etc

Although switches can be mutual network with each other, but it is need a special host,

Needn't special host, every device all same. in the same network, one device connected wifi, others will connect mesh network automatically

Scan Code Configuration

Mobile phone scan the QR code on LED strip, add equipment,
complete the configuration, simple operation,
more stable and reliable.

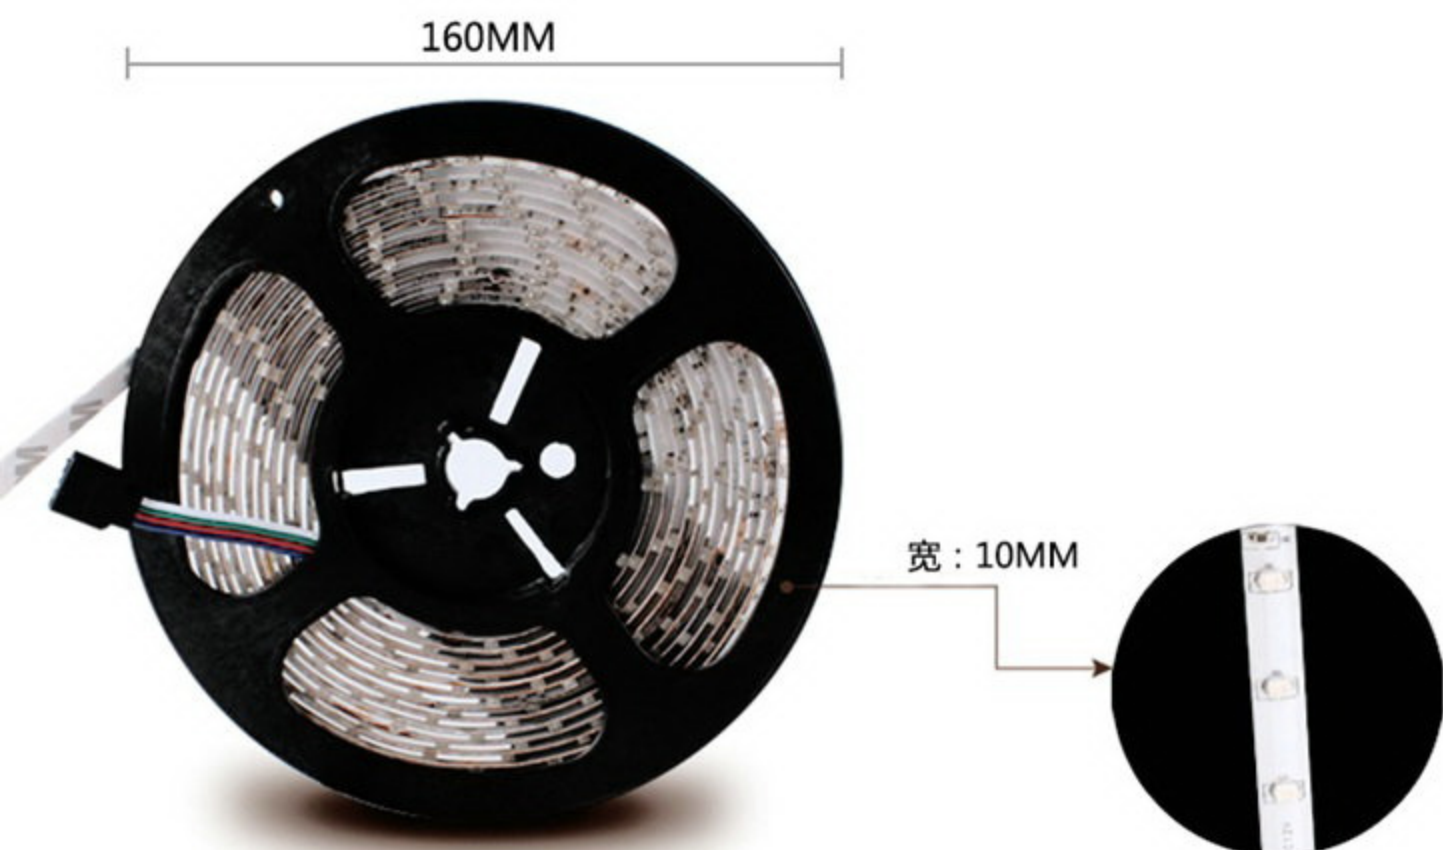

Energy Saving and Environmental Protection

It is made of high light transmittance PC material. The light transmittance is as high as 95%. The illumination uniformity is good. It is not irritating to the eyes. In comparison, it has a longer life and is more energy-efficient.
